

## EU Technical Documentation Assessment Certificate (MDR)

Pursuant to Regulation (EU) 2017/745 on Medical Devices, Annex IX Chapter II  
(Implantable Class IIb Devices and Class III Devices)

**No. G70 079546 0031 Rev. 00**

**Manufacturer:****ZOLL Medical Corporation**

269 Mill Road  
Chelmsford MA 01824-4105  
USA

SRN Manufacturer - US-MF-000021386

**Authorized  
Representative:**

ZOLL International Holding B.V.  
Einsteinweg 8A, 6662 PW Elst, THE NETHERLANDS

The Certification Body of TÜV SÜD Product Service GmbH certifies that the manufacturer has drawn up and presented a Technical Documentation according to Annex II and III of the Regulation (EU) 2017/745 on medical devices. Details on devices covered by the Technical Documentation are described on the following page(s).

The Report referenced below summarises the result of the assessment and includes reference to relevant CS, harmonized standards and test reports. The technical documentation assessment included an assessment of the clinical evaluation assessment.

The conformity assessment has been carried out according to Annex IX chapter II of this regulation with a positive result. Changes to the approved device, where such changes could affect the safety and performance of the device or the conditions prescribed for use of the device, shall require approval from the notified body TÜV SÜD Product Service GmbH.

In order to place the devices on the market with CE-marking, an EU Quality Management System Certificate pursuant to Annex IX chapters I and III is necessary in addition to this EU Technical Documentation Assessment Certificate. All applicable requirements of the Testing, Certification, Validation and Verification Regulations TÜV SÜD Group have to be complied with. For details and certificate validity see: [www.tuvsud.com/ps-cert?q=cert:G70 079546 0031 Rev. 00](http://www.tuvsud.com/ps-cert?q=cert:G70 079546 0031 Rev. 00)

| <b>Intended Purpose:</b> | The intended purpose of the ZOLL AED Plus is to help victims of sudden cardiac arrest. Using compatible ZOLL defibrillation electrodes which connect the patient to the ZOLL AED Plus, the AED automatically analyzes the victim's ECG rhythm to determine whether an electrical shock should be delivered. If the AED detects a shockable rhythm (coarse ventricular fibrillation or wide complex ventricular tachycardia), it alerts the rescuer that a shock is advised and then it either issues instructions to press the flashing shock button (semi-automatic model) or it automatically delivers the shock after a 3 second countdown (fully automatic model). The AED then prompts the rescuer to perform CPR for a pre-configured period of time. |

We herewith declare that the products detailed within this declaration meet the requirements and provisions of the EU Medical Device Regulation 2017/745 and Switzerland's Medical Device Ordinance (MedDO) of 1 July 2020. All supporting documentation is retained on the premises of ZOLL Medical Corporation. ZOLL Medical Corporation assumes responsibility for compliance with the requirements of Regulation (EU) 2017/745, MedDO, and all other Union legislation applicable to the device.

The products detailed within this declaration products were in conformance with the provisions of Council Directive 2002/96/EC of 27 January 2003 on Waste Electrical and Electronic Equipment which was repealed by Directive 2012/19/EU of the European Parliament and of the Council of 4 July 2012 on Waste Electrical and Electronic Equipment (WEEE). At this time, these products are in conformance with the provisions of Directive 2012/19/EU.

In addition, the products listed herein are in conformance with the provisions of Council Directive 2011/65/EU as amended on the restriction of the use of certain hazardous substances in electrical and electronic equipment which apply to them.

| Intended Purpose       | The intended purpose of the ZOLL AED Plus is to help victims of sudden cardiac arrest. Using compatible ZOLL defibrillation electrodes which connect the patient to the ZOLL AED Plus, the AED automatically analyzes the victim's ECG rhythm to determine whether an electrical shock should be delivered. If the AED detects a shockable rhythm (coarse ventricular fibrillation or wide complex ventricular tachycardia), it alerts the rescuer that a shock is advised and then it either issues instructions to press the flashing shock button (semi-automatic model) or it automatically delivers the shock after a 3 second countdown (fully automatic model). The AED then prompts the rescuer to perform CPR for a pre-conditioned period of time. |
| Harmonized Standards   | See "General Safety and Performance Requirements Checklist"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
